

Linked Units for long goods and sheet materials

Pull-out units in a racking system are often the best way of storing palletised goods, but what do you do with **longer items or sheet materials** which won't fit into a pallet space? Do you have to keep them in another part of your store, or on pallets on the ground, with the delays and inconvenience that involves? Not any longer!

Smart Storing has an elegant solution: we **link two pull-out units together** with a mid-section. Mount the Linked Units on a beam in your standard pallet racking and you have a cost-effective and practical long goods storage unit at a convenient working height amongst your regular inventory.

Features

- ☑ 70% and 100% extension units are available.
- ☑ Can also be floor-mounted out of the rack with accessory feet
- ☑ Can be mixed in with other pull-out units, even one shelf at a time
- ☑ Handle sheet materials up to 3m x 1.5m and up to 1600kg per unit
- ☑ Handle long goods up to 3m length and weighing up to 1600kg per unit
- ☑ Compact storage with up to six levels within an ergonomic handling height
- ☑ Different types and sizes of materials needed for the same process can be stored all together
- ☑ Pull-out units mean goods can be loaded with a crane or a fork lift truck, and are typically picked with a crane or a vacuum lifter

Linked Units in pallet racking

Normally these units are Beam-mounted at the base of the rack. Long goods such as rods and pipes can be loaded in bundles, with or without wrapping and picked one at a time.

Storing sheet materials on pull-out shelves

With Linked Pull-out Units, we offer an efficient storage system for large and, if necessary, heavy sheet materials in the pallet rack. Pull-out units give you extra vertical space as you don't need to leave room for access above the products and they can be more densely stacked. When you want to take out a sheet, you can slide out the whole stack and take one off the top without dragging or spoiling it – very important if

you're dealing with easily damaged surfaces. If you're using a taller pallet rack, it can make sense to use the upper levels for buffer stocks of whatever you have on the picking levels.

Pull-out shelf systems save resources, as a fork lift truck and driver are only needed for loading the units with whole bundles in the first place.

Accessories

A range of accessories is available for adapting Linked Units to your needs, for example: Feet for floor mounting, handles, steel shelf panels, steel cladding for enclosing units tool boxes, restraining stops for long goods.
